

Danielle DiEsso

Grade 3

Mr. Weinhold

I go to school at Franklin Township School. It is the year 2015. My school is made from red bricks. It is a small school. I like that it is a small school because it is not hard to find your way around and the class size is small which helps you learn better.

I like that we can have animals in our classroom. We can't have all kinds of animals but, animals without fur. We have fish, frogs, and snails. We learn about the animals in the class. We feed them special treats sometimes and it makes me happy to have them in our class.

We get to use I-pads in our school. We go on Study Island and take short tests. Study Island is a program where you can take tests and learn on any subject. It's pretty fun to go on. Our teacher is nice enough to let us do game mode and if you get a question right you get to play a game.

We have many specials at our school. The specials are; gym, art , stem, music, spanish, computers and library. I like having all these specials. They are fun and they give you a break from regular school work. I have many favorites but, my four favorite are gym, art, computers and stem. I like theses four because in stem you get to create things. As of right now we are creating robot arms that pick up cups.It's so cool.

In the year 2037 the school may be very different. It might be bigger because they add on to it. Maybe they will allow all kinds of animals in the classrooms. They may even have a zoo! Maybe in the year 2037 the I-pads we use will be turned into school

robots. Maybe the specials will be even better because technology will be so much better!

I've told you what my school was like in the year 2015. Maybe in the year 2037 you can write back and I can see how much the school changed!
